

ENVIROGRAF® PRODUCT 39

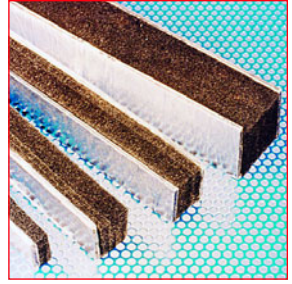

INTUMESCENT EXPANSION JOINTS

DESCRIPTION

Envirograf® intumescent expansion joints are compressible, fireproof sponge strips with foil-clad intumescent material. Unaffected by water or chemicals, easy to install, available in three types and various sizes.

USE

Useful as movement or expansion joints in fire walls, floors, concrete slabs, and steel work, or as a cavity joint between brickwork and timber structures. They can be used around ventilation ducting as a movement and anti-vibration joint, using double-sided tape to adhere to the ducting, and can also be fitted to seal over the tops of cable trays passing through protected building elements.

PERFORMANCE

Product 39 underwent a fire resistance test employing the general procedures and criteria of BS476 Part 22 (1987), sealing vertical expansion joints of different width, achieving integrity and insulation results of up to 240 minutes.
